Five Reasons Adults with Any of These Conditions Should Be Vaccinated Against Pneumococcal Disease

1. Pneumococcal disease is a deadly infection that can come on quickly.

2. Among adults who get pneumococcal disease, those age 65 and older and adults of any age with underlying medical conditions are at higher risk of death.

3. People who get pneumococcal disease may face hospitalization, long recovery time, and devastating life-long problems.

4. Vaccination can help protect you from pneumonia, meningitis, and bloodstream infections.

5. Getting vaccinated is the safest, most effective way to protect yourself.

If you or a loved one has any of these conditions, ask a healthcare professional about vaccination today.
